Non acceptance of an original article for publication

Prof. Y.I. Singh
Managing Editor, JCMS-Nepal, College of Medical Sciences, Bharatpur, Nepal

At the beginning one will find some difficulties in writing an original article. But after following the proper guidelines of the journal, the article will be fit for publication. There may be one or more reasons of non acceptance of an original article for publication. Usually one author wrote such an article only. The names of other authors are just written without much contribution. An article jointly contributed and written by authors will definitely give better results. **It is to be noted clearly that the article to be sent for publication should be written by following the strict guidelines of the journal.** Such guidelines are not same in all respects i.e. each journal has got its own pattern of guideline. Once the method of writing is familiar, it will be like "eyes will see what mind knows".

It will be too long to write the details. In brief, in most of the journals the following pattern is adopted.

1. Title with name (s) of authors mentioning the name of the Institution where author (s) is working.
2. Abstract
3. Introduction
4. Materials and methods
5. Results
6. Discussion
7. Conclusion
8. Acknowledgment if any
9. References

The above 1-9 (known as format popularly) should be written as per the instruction. For each section of format, the instructions should be followed e.g in some journals the number of words for abstract should not exceed 300 words, Key words 3-6 etc.

In each section of the format the words written should be written in total i.e Materials and methods (not to be written as material and method). In some of the journals it is also mentioned that the whole article should not be more than 3000 words. If such limitation of word is mentioned it should be followed. Spelling, grammatical mistake, etc should be seen.

It is worth to mention that most of the authors do not follow the guidelines for references. Some examples are

Please note that page number, name (s) of authors etc should be strictly followed as per guideline. It is frequently found that references from different journals are copied without following guidelines e.g K.A. Ftery, (not to be written as Ftery KA. that might had been written in the previous journal), for page number 834-40. (834-840 should not be written).

After completion of format the article will be sent to subject expert. After clearance of expert the article is considered for publication by following editorial policy of the journal.

**Summary**

1. Formatting to be strictly followed
2. Scientific material to be proper as determined by subject expert
3. Policy of the journal

After everything is ok in the above 1-3 the article is fit for publication.
